## DURO-LAST INSULATION PLATE

### Description:

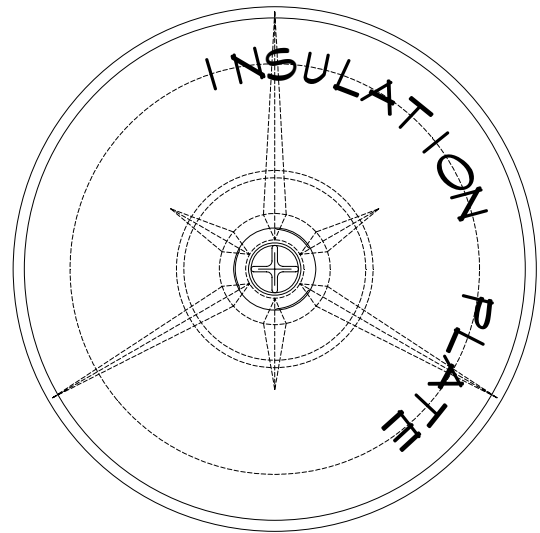

The Duro-Last® Insulation Plate is a 0.375-inch (9.5mm) thick, 3-inch (76.5mm) diameter distribution plate designed to hold insulation and underlayment boards under the Duro-Last® roofing system.

The Duro-Last® Insulation Plate includes a recessed 0.280-inch diameter hole in the center, keeping the head of the fastener from coming into contact with the Duro-Last® roofing membrane. To maintain necessary strength and position, the Duro-Last® Insulation Plate is manufactured with a thick center that embeds into the insulation and a thin flexible exterior to help reduce facer tear. In addition, there are tabs pressing against the fastener head to prevent the fastener from backing out.

The Duro-Last® Insulation Plate is a long-lasting, durable plate that is available only from Duro-Last®, Inc.

### Installation:

The Duro-Last® Insulation Plate must be used for securing ONLY insulation to the deck. Be sure to follow all specifications and guidelines published in the Duro-Last® specification manual.

Order Quantity	1000 per box
Color	Black
Weight per box	20 lbs.
