

PRODUCT DATA SHEET

DURO-LAST SB-240 MASTIC

Description:

Duro-Last[®], Inc. supplies trowelable mastic for use with the Duro-Last[®] Roofing Membranes. SB-240 is medium weight solvent release mastic for use with the Duro-Last[®] Single-Ply Roofing System. SB-240 uses synthetic rubber and resins as base products that provide excellent water-resistant properties and adhesion.

SB-240 is moisture-resistant, which is most important with today's high tech single-ply materials. SB-240 is normally used as an underseal. ***This product cannot be used as a splicing cement, pitch pocket filler, night seal or perimeter flashing adhesive.*** It is not contact cement, but a sealant.

SB-240 is formulated for adhesion to all types of building materials including masonry, wood, metal, insulation, and galvanized flashing. Its high tack ensures a weather-tight seal around penetrations.

SB-240 is odorless and easy to use. Cleanup is easily accomplished with Mineral Spirits or Naphtha. Use extreme caution when using solvents for any cleanup. Duro-Last[®], Inc. has SB-240 available in five gallon pails, which will seal approximately 450 square feet (42 m²) of Duro-Last membrane. SB-240 must be installed in accordance with current Duro-Last[®], Inc. specifications.

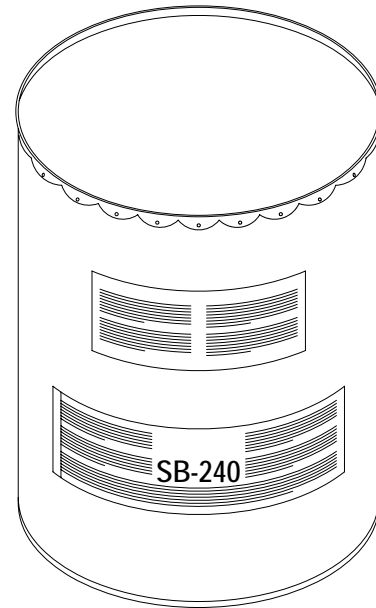

Installation:

SB-240 can be used for back-seal, scuppers, drains, flashing details and under the membrane. *In no instance shall the SB 240 be used in such a way that it would be subject to permanent exposure to ultraviolet radiation.*

Note: SB-240 is also available in 10.3 oz. tubes. Contact our sales department for availability.

For more information on these and other Duro-Last Products, contact the Duro-Last Engineering Services Department.
