

# The American Institute of Architects Continuing Education System

AIA/CES Registered Provider Program Summary Handout

**Provider:** Duro-Last Roofing, Inc. **Program #:** STD004

**Program:** Thermoplastic Roofing – Materials and Systems

**Length:** 1.0 hour

**Credits:** 1.0 LU Hour **HSW:** Yes **SD:** No

## **Description:**

An overview of thermoplastic single ply roofing systems including a discussion of the characteristics of major players and what issues to consider when specifying a system.

## **Learning Objectives:**

At the end of this program participants will: 1) be able to summarize the background and characteristics of thermoplastic single-ply roofing; 2) compare and contrast the characteristics of PVCs and TPOs; 3) identify some of the key criteria to consider when selecting a roof system for high performance buildings.

## **How taught:**

Utilizing a PowerPoint presentation the facilitator will lead the participants through the development of single-ply and thermoplastics to focus on current major technologies. Participants will be presented with a comprehensive list of questions and criteria that should be considered during the decision-making process.

## **A/V needed:**

Electrical power and a screen for the PowerPoint presentation. (The facilitator may provide a laptop and projector if not available on-site.)

## **Target Audience:**

Architects, engineers, specifiers, building owners, building managers, contractors, or other design and construction professionals. Any size group may be accommodated. The experience level is beginner to intermediate.

## **Facilitator Qualifications:**

All Duro-Last presenters are trained in the CES guidelines and presentation skills in addition to the training and expertise they have in the subject area specific to the program.

**Costs:** No Charge.
